

Do you need **fast, predictable** and exceptionally **qualified** programmers who
? We found them.

zerocracy.com

Until we invented Zerocracy, we struggled like you struggle now. Programmers made too many **mistakes**, took too much **time**, and demanded to be paid for **40-hour weeks** even when no progress was made. Worse, relying on a single programmer was always a **risk**.

Here is how Zerocracy works. You fund your project, programmers apply, and you let them contribute to your codebase. You pay a **fixed fee** per pull request, only after you **verify** and **accept** it. You never pay for time, only for code that meets your **quality bar**.

This changes everything. Programmers deliver **faster** because they earn more by completing more tasks. Quality stays high because rejected work means **no payment**. Deadlines become **predictable** because incentives are aligned.

You no longer depend on a single programmer. Dozens of them collaborate, **decomposing** large tasks into smaller ones. If one disappears, others continue. Your project moves forward **regardless**.
